### 4.2 Back-Light Unit

The backlight system is an edge-lighting type with 4 LED Dies. The characteristics of the LED are shown in the following tables.

Item	Symbol	Min	Тур	Max	Unit	Note
LED current	IL	-	60	80	mA	(2)
LED voltage	VL	-	2.8	3.2	V	
Operating LED life time	Hr	-	20000	15000	Hour	(1)(2)

Note (1) LED life time (Hr) can be defined as the time in which it continues to operate under the condition: Ta=25 $\pm$ 3  $\,^{\circ}$ C, typical IL value indicated in the above table until the brightness becomes less than 50%.

Note (2) The "LED life time" is defined as the module brightness decrease to 50% original brightness at Ta=25°C and IL=80mA. The LED lifetime could be decreased if operating IL is larger than 100mA. The constant current driving method is suggested.
